Applicant(s)

HANNA ET AL.

Examiner

David E. England

Art Unit

2143

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 16 May 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 5.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

Art Unit: 2143

### DETAILED ACTION

1. Claims 1 – 30 are presented for examination.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, 9, 10, 11, 12, 19, 20, 21, 22, 29, 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnold U.S. Patent No. 6275848.

3. Referencing claim 1, Arnold teaches a method for replacing an attachment to an email message with a reference to a location of the attachment, comprising:

4. receiving the email message, (e.g. col. 1, lines 13 – 25);
5. examining the email message to determine if the email message includes an attachment, (e.g. col. 2, lines 20 – 60); and
6. if the email message includes the attachment,
7. storing the attachment at a location on a communication network from which the attachment can be retrieved, (e.g. col. 2, lines 20 – 50),
8. modifying the email message by replacing the attachment with a reference specifying the location of the attachment on the communication network, (e.g. col. 2, lines 20 – 50),

Art Unit: 2143

9. sending the modified email message to a recipient of the email message, (e.g. col. 2, lines 20 – 50), and

10. deleting the attachment from the location on the communication network after on of:

11. receiving a notification that all recipients of the email message have retrieved the attachment, (e.g. col. 4, line 25 – col. 5, line 56), but does not specifically teach receiving a notification that all recipients of the email message have deleted the email message.

12. Official Notice is taken that it was a common practice to receiving a notification that all recipients of the email message have deleted the email message at the time the instant invention was made.

13. It would have been obvious to one having ordinary skill in the computer art at the time of the invention was made to modify the method disclosed by Arnold to receiving a notification that all recipients of the email message have deleted the email message using the teaching of common practice. The modification would be obvious because one of ordinary skill in the art would be motivated to receiving a notification that all recipients of the email message have deleted the email message because in conventional e-mail systems when an e-mail with an attachment is deleted the attachment attached to the e-mail is deleted with the e-mail. If a user or a group of users desire to delete an e-mail, then it would be obvious that the user or group of users no longer need the e-mail or it's contents taking up space in their "mailbox", therefore, deleting anything attached or associated with the email.

14. Referencing claim 2, Arnold teaches receiving the modified email message at the recipient, (e.g. col. 2, lines 20 – 50); and

Art Unit: 2143

15. using the reference specifying the location of the attachment to retrieve the attachment across the communication network, (e.g. col. 2, lines 20 – 50).

16. Referencing claim 9, Arnold teaches wherein the attachment is a file, (e.g. col. 2, lines 20 – 50).

17. Referencing claim 10, Arnold teaches the reference specifying the location of the attachment includes a uniform resource locator (URL), (e.g. col. 3, line 57 – col. 4, line 5).

18. Claims 11, 12, 19, 20, 21, 22, 29, 30 are rejected for similar reasons as stated above.

19. Claims 3 – 5, 8, 13 – 15, 18, 23 – 25, 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnold (6275848) in view of Eldridge et al. (6397261) (hereinafter Eldridge).

20. As per claim 3, Arnold does not specifically teach retrieving the attachment includes authenticating the recipient to a computer system upon which the attachment is stored. Eldridge teaches retrieving the attachment includes authenticating the recipient to a computer system upon which the attachment is stored, (e.g. col. 5, line 47 – col. 6, line 2). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Eldridge with Arnold because it would be more secure if the user utilized an authentication system in the invention so to keep unauthorized users from accessing attachments that are private in nature.

Art Unit: 2143

21. As per claim 4, Arnold does not specifically teach receiving the email message includes receiving the email message at one of,

22. an application residing on a computer system belonging to a sender of the email message;

23. an email server through which the email message is sent;

24. a firewall that protects at least one trusted computer system from communications across the communication network; and

25. a gateway that converts the email message from a first format to a second format.

Eldridge teaches receiving the email message includes receiving the email message at one of,

26. an application residing on a computer system belonging to a sender of the email message, (e.g. col. 5, line 47 – col. 6, line 64);

27. an email server through which the email message is sent, (e.g. col. 5, line 47 – col. 6, line 64);

28. a firewall that protects at least one trusted computer system from communications across the communication network, (e.g. col. 5, line 47 – col. 6, line 64); and

29. a gateway that converts the email message from a first format to a second format, (e.g. col. 5, line 47 – col. 6, line 64). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Eldridge with Arnold because the system would be more secure if the email were to go through some type of security point to prevent unauthorized email to enter different domains or systems so not to corrupt or damage any system from working, also, if needed, a second format would be needed if different protocols were implemented in the system that the email is being sent to making the system more versatile in accepting different types of network transport formats. Furthermore, having the system with an

Art Unit: 2143

email server with a user having an application residing on a computer system belonging to a sender of the email message would be more convenient because it is a common practice in email technology.

30. As per claim 5, Arnold does not specifically teach allowing the attachment to be updated at the location on the communication network. Eldridge teaches allowing the attachment to be updated at the location on the communication network, (e.g. col. 17, lines 8 – 16). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Eldridge with Arnold because if the attachment is old and newer versions of the attachment were available, it would be more efficient for a system to have an updated version of the attachment in case of important information that was added can be viewed and not missed.

31. As per claim 8, Arnold does not specifically teach if the email message includes the attachment, the method further comprises:

32. asking a sender of the email message whether to replace the attachment with the reference specifying the location of the attachment; and

33. replacing the attachment only if the sender agrees to replace the attachment. Eldridge teaches if the email message includes the attachment, the method further comprises:

34. asking a sender of the email message whether to replace the attachment with the reference specifying the location of the attachment, (e.g. col. 7, lines 15 – 58); and

35. replacing the attachment only if the sender agrees to replace the attachment, (e.g. col. 7, lines 15 – 58). It would have been obvious to one of ordinary skill in the art at the time the

Art Unit: 2143

invention was made to combine Eldridge with Arnold because it would be more convenient for a user to have the option to replace the attachment if there is one present and/or the attachment is not a too big, causing a potential error in transmission.

36. Claims 8, 13 – 15, 18, 23 – 25, and 28 are rejected for similar reasons as stated above.

37. Claims 6, 16, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnold (6275848) in view of Pollack (6505236) in further view of Trenbeath et al. (6324587) (hereinafter Trenbeath) in further view of Birrell et al. (6092101) (hereinafter Birrell).

38. As per claim 6, Arnold does teach the deletion of attachments, (e.g. col. 2, line 20 – 50), but does not specifically teach deleting the attachment from the location on the communication network after at least one of:

39. an expiration of a time period;

40. sending a notification to recipients of the email message that the attachment is to be deleted;

41. receiving a command to delete the attachment from a sender of the email message; and

42. storing the attachment to archival storage. Pollack teaches deleting the attachment from the location on the communication network after at least one of:

43. an expiration of a time period, (e.g. col. 2, lines 26 – 57). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Pollack with Arnold because it would be more efficient if the system had a way to delete information that is

Art Unit: 2143

old and no longer being used by the user. Pollack does not specifically teach sending a notification to recipients of the email message that the attachment is to be deleted;

44. receiving a command to delete the attachment from a sender of the email message; and

45. storing the attachment to archival storage. Trenbeath teaches sending a notification to recipients of the email message that the attachment is to be deleted, (e.g. col. 9, lines 19 – 35);

46. receiving a command to delete the attachment from a sender of the email message, (e.g. col. 29, line 60 – col. 30, line 6). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Trenbeath with the combine system of Arnold and Pollack because of similar reasons as stated above. Trenbeath does not teach storing the attachment to archival storage. Birrell teaches storing the attachment to archival storage, (e.g. col. 1, lines 51 – 59). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Birrell with the combine system of Arnold, Pollack and Trenbeath because if a user needed the information that was old for historic reference then it would be more efficient if the user had an option of storing the attachment in a different location, (i.e. personal folder), so to free up space for other user's attachments that are not old.

47. Claims 16 and 26 are rejected for similar reasons as stated above.

48. Claims 7, 17, 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnold (6275848) in view of Birrell (6092101).

49. As per claim 7, Arnold teaches the communication network includes at least one of:

Art Unit: 2143

50. a computer network, (e.g. col. 3, lines 51 – 56), but does not specifically teach a telephone network. Birrell teaches a telephone network, (e.g. col. 4, lines 26 – 36). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Birrell with Arnold because it would be more versatile for a user to utilize the system on a two potentially different types of networks, LANs and dial-up networks. This would make the system more available for users in a work environment or a personal home environment.

51. Claims 17 and 27 are rejected for similar reasons as stated above.

### *Conclusion*

52. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

53. a. Wang et al. U.S. Patent No. 6314454 discloses Method and apparatus for certified electronic mail messages.

54. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 2143

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David E. England whose telephone number is 703-305-5333. The examiner can normally be reached on Mon-Thur, 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on 703-308-5221. The fax phone numbers for the organization where this application or proceeding is assigned are none for regular communications and none for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is none.
